What are the regulations governing solar PV systems?

Solar PV systems must be installed in accordance with any federal and local regulations and primarily follow Article 690, "Solar Photovoltaic Systems," of the National Fire Protection Association (NFPA) 70: National Electrical Code[®] (NEC).

How should a Photovoltaic (PV) system be designed?

A Photovoltaic (PV) system should be designed by safely sizing wires and overcurrent protection devices. This design process should consider the trade-off between system voltage, wire length, line losses, and system cost. Safely sizing wires and overcurrent protection devices is essential. PV systems must also be installed in accordance with any federal and local regulations.
