What if my sheltered generator overheats?

The following steps can be taken if you notice your sheltered generator overheating: Ensure the area above the generator is open and there is good air circulation. Install vents in the shelter to allow airflow in. Add a fan to draw cool air in and hot air out as the generator operates.

How do I prevent my Generator from overheating?

Other than regular servicing, here are other things you should do to prevent your generator from overheating. o Keep both the coolant and oil levels at their correct levels. o Monitor the exhauster to make sure that it is not blocked. o Place the generator in a protected but well-ventilated area.
