How much space does a photovoltaic system need?

Photovoltaic modules installed on the ground or on a flat surface occupy an area of approximately 20 m²/kWp, avoiding shading between the rows of modules. The design of a photovoltaic system, from the public operator's network to the photovoltaic modules, requires careful planning and compliance with local regulations.

Do I need to redraw my module layout in PVSyst?

There's no need to redraw your module layout in PVSyst. Thanks to our pv plugin, you can simply export your drawings from AutoCAD or BricsCAD to within seconds and start simulating the performance and yield of your system immediately. Both fixed tilt and tracker systems are supported by the .PVC export format or .CSV of ground mesh.
