

Liquid cooling energy storage cabinet structure diagram

Can a liquid cooled and air cooled cabinet be paired together?

Outdoor liquid cooled and air cooled cabinets can be paired together utilizing a high voltage/current battery combiner box. Outdoor cabinets are manufactured to be a install ready and cost effective part of the total on-grid, hybrid, off-grid commercial/industrial or utility scale battery energy storage system. BESS string setup examples are:

What is Vericom energy storage cabinet?

Vericom energy storage cabinet adopts All-in-one design, integrated container, refrigeration system, battery module, PCS, fire protection, environmental monitoring, etc., modular design, with the characteristics of safety, efficiency, convenience, intelligence, etc., make full use of the cabin Inner space.

What is a liquid cooled system?

A liquid cooled system is generally used in cases where large heat loads or high power densities need to be dissipated and air would require a very large flow rate. Water is one of the best heat transfer fluids due to its specific heat at typical temperatures for electronics cooling.

What is included in a battery cabinet?

Each battery cabinet includes an IP56 battery rack system, battery management system (BMS), fire suppression system (FSS), HVAC thermal management system and auxiliary distribution system. Outdoor liquid cooled and air cooled cabinets can be paired together utilizing a high voltage/current battery combiner box.

Why do data centers need a liquid cooling system?

By integrating advanced liquid cooling technology with advanced cabinet systems, densely configured racks can support higher core counts and workloads, allowing data centers to utilize real estate more efficiently.

How to choose a liquid cooling solution for high rack power density?

When selecting a liquid cooling solution for high rack power densities and improved efficiency, several factors should be considered, including ease of adoption, deployment cost, reliability, efficiency, and sustainability. Based on these factors, two-phase direct on-chip liquid cooling is the optimum liquid cooling method.
