

What is solar-thermal-electric conversion?

Among them, solar-thermal-electric conversion is recognized as one of the most promising technologies to convert solar energy into electricity and such technology has been implemented in many industrial fields 12,13,14. Unlike photovoltaic systems, solar-thermal-electric conversion systems store solar energy as heat in thermal storage materials.

What is the future of solar energy?

The Future of Solar Energy considers only the two widely recognized classes of technologies for converting solar energy into electricity -- photovoltaics (PV) and concentrated solar power (CSP), sometimes called solar thermal) -- in their current and plausible future forms.

What is solar thermal energy?

Solar thermal energy (STE) is a form of energy and a technology for harnessing solar energy to generate thermal energy for use in industry, and in the residential and commercial sectors. Solar thermal collectors are classified by the United States Energy Information Administration as low-, medium-, or high-temperature collectors.

What is solar-thermal technology?

Solar-thermal technology is regarded as the most efficient and direct way to harness solar energy. It has already been adopted in multiple fields such as domestic heating 4,5, steam generation 6,7,8, seawater desalination 9,10 and solar-thermal power plants 11.

Can solar thermal power be converted to electricity?

Solar thermal power can also be converted to electricity by using the steam generated from the heated water to drive a turbine connected to a generator. However, because generating electricity this way is much more expensive than photovoltaic power plants, there are very few in use today.

Can a thermoelectric generator convert solar energy into electricity?

By connecting with a thermoelectric generator, the harvested solar-thermal energy can be further converted into electricity with a solar-thermal-electric energy conversion efficiency up to 2.56%, and the converted electrical energy can simultaneously light up more than 40 orange-colored LEDs.
