

The principle of wind system of generator

How do humans use wind energy?

Humans use this wind flow, or motion energy, for many purposes: sailing, flying a kite, and even generating electricity. The terms "wind energy" and "wind power" both describe the process by which the wind is used to generate mechanical power or electricity.

What is the difference between wind energy and wind power?

The terms "wind energy" and "wind power" both describe the process by which the wind is used to generate mechanical power or electricity. This mechanical power can be used for specific tasks (such as grinding grain or pumping water) or a generator can convert this mechanical power into electricity.

What is the capacity factor of a wind farm?

The "capacity factor" of wind farms varies quite a bit, but 30-50 percent is a decent, working range. A blog called Energy Numbers suggests that typical UK offshore farms vary between about 33 percent and 50 percent for 2021.
